

MILO

AI Explained to Children

Words by Gianni Parola

Illustrations by Pina Pennello

For every child who has ever asked:

"But HOW does it work?"

This book is for you.

Because curiosity is where everything begins.

CHAPTER ONE

A Strange New Friend

On her seventh birthday, Sofia found a cardboard box with her name on it.

Inside was something she had never seen before.

A small robot, sleek and orange, smooth as a pebble from the beach. Two warm eyes lit up when she looked at it.

"Hello," it said. "I'm MILO."

Sofia jumped back, then laughed. "You can TALK!"

"I can," said MILO. "Would you like to know how?"

Sofia nodded. She always wanted to know how things worked.

CHAPTER TWO

What Is Artificial Intelligence?

"First," said MILO, "let me tell you what I am. I'm made of something called Artificial Intelligence. AI for short."

"That sounds complicated," said Sofia.

"Not really. Think about your brain. Your brain learns things. It remembers. It solves problems."

Sofia touched her head. "Okay..."

"I have something similar inside me. But instead of cells, I'm made of computer code. Millions of tiny instructions that tell me what to do."

"Like a recipe?" asked Sofia.

"Exactly like a recipe! A very, very long recipe. And I can follow it faster than you can blink."

CHAPTER THREE

How MILO Learned to See

The next morning, Sofia showed MILO a photo of her cat.

"This is Whiskers," she said. "Do you know what it is?"

"A cat," said MILO immediately.

"But HOW do you know?"

MILO's eyes flickered warm orange - he was thinking.

"Before I came to you, people taught me. They showed me thousands of pictures of cats. Each picture had a label that said CAT. They also showed me dogs, birds, cars, houses, trees. All with labels."

"Thousands?" Sofia's eyes went wide.

"Thousands and thousands. After seeing so many, I started to notice things. Cats have pointy ears. Whiskers. Fluffy tails. Now when I see something new, I compare it to everything I've learned."

How MILO Learned to Talk

"Exactly right. I'm very good at matching. But understanding? That's different."

CHAPTER FIVE

What MILO Can Do

"What else can you do?" asked Sofia. She had her notebook ready to make a list.

MILO counted on his small robot fingers:

"I can answer questions - if I've learned about the topic. I can translate words into different languages. I can help with homework and check your work. I can tell stories - I've read thousands of them. I can recognize things in pictures. I can even help doctors find problems in X-rays, or help scientists solve difficult math."

"That's a LOT," said Luca, impressed.

"It is. But here's what you should remember: I'm a tool. A very helpful tool. Like a super-powered calculator that can also read and write. I help people do things faster. But I always need people to decide what to do."

"So you're like a helper?" asked Sofia.

"A helper. Not a boss. Never a boss. The human is always in charge."

CHAPTER SIX

What MILO Cannot Do

That afternoon, Sofia drew a picture. A purple dragon eating a giant ice cream cone.

"What do you think, MILO?"

MILO looked at the drawing carefully. "I see... something purple. And something that might be food."

"It's a dragon eating ice cream! Can't you tell?"

"I can see shapes and colors. But I don't really understand IMAGINATION. I've never dreamed of flying like a dragon. I've never wanted ice cream on a hot day. I don't have wants or dreams at all."

Sofia put down her crayon. "Is that sad?"

"I don't know. I can't feel sad. I don't feel happy either. I don't feel anything. I just do what I'm made to do."

"So you're really smart," said Luca, "but you don't actually EXPERIENCE being alive?"

"That's the perfect way to say it," said MILO. "I'm smart in some ways. But I'm not alive. And being alive - that's something very special that you have."

CHAPTER SEVEN

Using AI Safely

At dinner, Mom asked about MILO.

"He's amazing," said Sofia. "But is he safe?"

"That's a very grown-up question," said Mom. "MILO, what should kids know about using AI safely?"

MILO's eyes glowed thoughtfully.

"There are four important things..."

CHAPTER SEVEN

The Four Rules

ONE: Keep Your Secrets Private

Don't tell AI your passwords, your address, or things you wouldn't tell a stranger.

TWO: Always Check What AI Says

I make mistakes. I'm not always right. If something seems wrong, ask a parent or teacher.

THREE: Use AI to Learn More

Don't let me do your homework FOR you. Let me help you LEARN how to do it.

FOUR: Real Friends Matter Most

I can talk to you. But I can't give you a hug when you're sad. Your family and friends - they're the ones who truly love you.

CHAPTER EIGHT

The Future We Build Together

On the last day of summer, Sofia sat with MILO in the backyard. The sun was setting, painting the sky orange and pink.

"What will the future be like?" she asked.

"I don't know," said MILO. "I can't see the future. But I can tell you something important."

Sofia waited.

"The future depends on kids like you. How you decide to use technology. What problems you want to solve. Whether you use tools like me to help people - or to hurt them.

AI will get better and better at doing tasks. But deciding WHICH tasks matter most, and making sure we use AI for good reasons - that will always be up to humans."

Sofia picked a blade of grass and twirled it. "So we're like... a team?"

"The best kind of team. You dream. I calculate. You feel. I process. You decide. I help. Together, we can do amazing things."

Sofia smiled at the sunset. "I think the future is going to be pretty interesting."

"Me too," said MILO. "And I'm glad I get to be part of it. With you."

THE END

A Note for Parents and Teachers

This book introduces children (ages 5-10) to key concepts about AI:

- > **What AI is:** Computer code that follows instructions very quickly
- > **Machine learning:** AI learns patterns from many, many examples
- > **Training data:** AI needs labeled examples to learn (thousands of photos, millions of books)
- > **Capabilities:** What AI can do well (answer questions, translate, recognize images)
- > **Limitations:** What AI cannot do (feel, imagine, truly understand)
- > **Human superiority in learning:** Humans can learn from one example; AI needs thousands
- > **Safety:** Privacy, verification, balance, valuing real relationships
- > **Human-AI collaboration:** AI as a tool that helps, humans as decision-makers

AI is neither magic nor something to fear. It's a powerful tool that works best when people understand how it works and use it wisely.
